

Dexin Wang

Software Engineer/ Full Stack Engineer

Summary

H1B holder, Master Degree, a results-driven and customer-focused **Software Engineer** with **2 years** hands-on experience for analyzing requirements, designing structures, and implementing functions. Have a wide range of project experiences including Web Application, Database Development, and Machine Learning. Excel in **requirement abstraction, modular construction, algorithm solving, database optimization, and learning new technical skills.**

Personal Info

Education

University of Oregon

Master of Computer Science, June 2017
Bachelor of Computer Science, June 2015

Skills

Programming Languages:

Java – J2EE, C# – .Net, JavaScript – React

Database Servers:

Microsoft SQL Server, Oracle DB, MongoDB, Google FireBase

Cloud Service:

AWS-S2 and S3, Google App Engine and Computer Engine

Certification

MSCA: SQL 2012 / 2014

MSCA: SQL 2016 BI Developer

Work Experience

Software Developer, Sun West Mortgage Company, Greater Los Angeles, CA

March 2018 – Aug 2019

Mortgage application design and development for lenders, brokers, and borrowers.

- Analyzed user requirements and developed highly scalable applications by applying agile methodology with J2EE platform.
- Designed Oracle relational database structures, functions, and triggers to handle data for loan manipulation and report generation.
- Created a central API Distributer to integrate business RESTful APIs for currency control.
- Reconstructed OOD (e.g. Data Change Handler System) to optimize whole web applications and services that increases 30% performance and reduces 10% coding lines.

Web Developer Intern, Arcman Trading Co., Los Angeles, CA

Nov 2017 – March 2018

Front-end and back-end development for a commercial website and data manipulation for retailing and direct marketing.

- Implemented new web features for company website with JavaScript, PHP, HTML, and CSS.
- Created JAVA ETL programs for data integration and presented in different granularity on Power View.
- Applied unit test and feature test to check front-end code and back-end code for usability.
- Maintained the website with daily logs and validated data in MySQL database to monitor availability.

Personal Projects

TicketMan: [Link](#)

The project provides event ticket search and recommendations with location-based services.

- Created Java servlets with RESTful API to handle HTTP requests and responses.
- Designed MongoDB to store data from TicketMaster API and use MapReduce for algorithm calculation.
- Designed algorithms to implement recommendations based on geo-location and search history.
- Deployed the project to EC2 with basic configuration and confirmed the ability to handle 140 queries using Apache JMeter.

IMDB-Learning: [Link](#)

A classification to predict the movie ranking score with three benchmarks: accuracy, time cost, and mean error.

- Pre-analyzed classified attributes with Weka to choose 3 stable algorithms and 3 unstable algorithms.
- Cleaned data via data filling, tuple deduplication, and feature deletion that gained 30% accuracy.
- Filtered useful Stand Score Normalization and Bag-of-words transformation which obtained 42% accuracy.
- Built an ensemble by Bootstrap Aggregating which utilized 6 algorithms and achieved 43% accuracy.
